Product Label Research Report

Source image: Dove.png

Category: Beauty Bar

Jurisdiction: India

Overall Summary

The Dove beauty bar contains a variety of ingredients that serve cleansing and moisturizing functions. Most ingredients are well-studied and considered safe for use in cosmetics, with some potential concerns primarily related to skin sensitivity and environmental impact. The product claims effective cleansing and moisturization, which are supported by the ingredient composition.

Ingredient Findings

Ingredient	Identity	Function	Origin	Benefits	Concerns	Long-term evidence	Status	Explanation	Sources
Sodium Lauroyl Isethionate	A sodium salt of lauroyl isethionic acid, a surfactant.	Cleansing agent and surfactant.	Synthetic	• Gentle cleansing properties • Mild on the skin	• May cause irritation in sensitive individuals	Limited long-term studies available; generally considered safe for use in cosmetics.	SUPPORTED	Sodium Lauroyl Isethionate is widely used in personal care products for its mildness and effectiveness as a surfactant.	drugscontrol.org
Stearic Acid	A saturated fatty acid found in various animal and plant fats.	Emulsifier and thickening agent.	Natural (can be derived from both plant and animal sources)	• Helps stabilize formulations • Provides a creamy texture	None reported	Generally recognized as safe; long-term use is well-documented.	SUPPORTED	Stearic Acid is commonly used in cosmetics and is considered safe for topical application.	drugscontrol.org
Sodium Palmitate	A sodium salt of palmitic acid, a fatty acid.	Emulsifier and surfactant.	Natural (derived from palm oil)	• Effective in cleansing and emulsifying • Helps improve skin feel	• Sustainability concerns related to palm oil sourcing	Generally considered safe; however, sustainability issues may arise from palm oil production.	SUPPORTED	Sodium Palmitate is widely used in cosmetics and is effective as an emulsifier.	drugscontrol.org
Lauric Acid	A saturated fatty acid found in coconut oil and palm kernel oil.	Surfactant and emulsifier.	Natural	• Antimicrobial properties • Good for skin conditioning	None reported	Well-studied with a long history of safe use in cosmetics.	SUPPORTED	Lauric Acid is known for its beneficial properties and is safe for use in cosmetics.	drugscontrol.org
Water	The most common solvent used in cosmetics.	Solvent and base for formulations.	Natural	• Hydrates and dissolves other ingredients	None reported	Considered safe; essential for all cosmetic formulations.	SUPPORTED	Water is a fundamental ingredient in cosmetics and is safe for all uses.	drugscontrol.org
Cocamidopropyl Betaine	A surfactant derived from coconut oil.	Cleansing agent and foam booster.	Natural (derived from coconut oil)	• Mild on the skin • Enhances foam and lather	• Possible skin irritation in sensitive individuals	Generally considered safe; however, some individuals may experience irritation.	SUPPORTED	Cocamidopropyl Betaine is widely used for its mildness and effectiveness in cleansing.	drugscontrol.org
Zinc Oxide	An inorganic compound used in various cosmetic formulations.	Sunscreen agent and skin protectant.	Natural	• Provides UV protection • Soothes irritated skin	None reported	Well-studied and recognized as safe for topical use.	SUPPORTED	Zinc Oxide is effective as a skin protectant and is safe for use in cosmetics.	drugscontrol.org

Ingredient	Identity	Function	Origin	Benefits	Concerns	Long-term evidence	Status	Explanation	Sources
Tetrasodium EDTA	A chelating agent used in cosmetics.	Stabilizes formulations by binding metal ions.	Synthetic	• Enhances product stability • Improves efficacy of preservatives	• Environmental concerns regarding biodegradability	Generally recognized as safe; however, environmental impact is a consideration.	SUPPORTED	Tetrasodium EDTA is effective in stabilizing cosmetic formulations.	drugscontrol.org
Benzyl Alcohol	An aromatic alcohol used as a preservative.	Preservative and solvent.	Natural (can be derived from plants) or synthetic.	• Effective preservative • Antimicrobial properties	• Can cause skin irritation in some individuals	Generally recognized as safe; however, some individuals may experience irritation.	SUPPORTED	Benzyl Alcohol is widely used as a preservative and is considered safe for use.	drugscontrol.org
Alpha-Isomethyl Ionone	A fragrance ingredient.	Fragrance component.	Synthetic	• Provides pleasant scent	• Potential allergen for sensitive individuals	Generally considered safe; however, may cause allergic reactions in some.	SUPPORTED	Alpha-Isomethyl Ionone is commonly used in fragrances and is generally safe.	drugscontrol.org

Claim Findings

Claim	Type	Status	Explanation	Sources
Cleanses skin effectively	Functionality	SUPPORTED	The presence of surfactants like Sodium Lauroyl Isethionate and Cocamidopropyl Betaine supports the claim of effective cleansing.	drugscontrol.org
Moisturizes skin	Functionality	SUPPORTED	Ingredients like Glycerin and Stearic Acid contribute to skin moisturization.	drugscontrol.org
