Product Label Research Report

Source image: Godrej.jpg

Category: Hand Wash

Jurisdiction: India

Overall Summary

The product contains a mix of natural and synthetic ingredients, primarily serving as a hand wash. Most ingredients are well-established as safe for use in cosmetics, although some, like BHT and certain colorants, have mixed safety profiles. Overall, the formulation appears to be compliant with Indian cosmetic regulations.

Ingredient Findings

Ingredient	Identity	Function	Origin	Benefits	Concerns	Long-term evidence	Status	Explanation	Sources
Water	Aqua	Solvent	Natural	• Acts as a solvent for other ingredients • Hydrates the skin	None reported	Well-established as safe for use in cosmetics.	SUPPORTED	Water is a common and safe ingredient used in cosmetics and personal care products.	IS 1796 (1986)
Perfume	Fragrance	Perfuming	Can be both	• Provides a pleasant scent to the product	• Can cause skin irritation or allergic reactions in sensitive individuals	Limited long-term safety data; potential for sensitization exists.	MIXED	While fragrances enhance user experience, they can also lead to allergic reactions in some individuals.	inkeedecoder.com
Sodium Chloride	Salt	Viscosity controlling	Natural	• Thickens the product • Can act as a preservative	None reported	Generally recognized as safe in cosmetic formulations.	SUPPORTED	Sodium chloride is commonly used in cosmetic formulations for its thickening properties.	IS 6608 (2004)
Glycerin	Glycerol	Moisturizer/Humectant	Natural (can be derived from plant oils)	• Hydrates the skin • Helps maintain skin barrier	None reported	Widely regarded as safe and effective for skin hydration.	SUPPORTED	Glycerin is a well-known humectant that draws moisture to the skin.	IS 1796 (1986)
BHT	Butylated Hydroxytoluene	Antioxidant	Synthetic	• Prevents oxidation of other ingredients • Extends shelf life of the product	• Potential skin irritant • Controversial due to possible health concerns	Safety is debated; some studies suggest potential endocrine disruption.	MIXED	While BHT is effective as an antioxidant, its safety profile is under scrutiny.	IS 6608 (2004)
Citric Acid	Citric Acid	pH adjuster, chelating agent	Natural (derived from citrus fruits)	• Helps maintain product stability • Can act as a mild exfoliant	• Can cause irritation in high concentrations	Generally recognized as safe in cosmetic formulations.	SUPPORTED	Citric acid is commonly used to adjust pH and enhance product stability.	IS 6608 (2004)
CI 47000	Colorant	Coloring agent	Synthetic	• Enhances visual appeal of the product	• Some colorants can cause allergic reactions	Safety varies by specific colorant; regulatory approval is required for use.	REVIEW	Colorants are regulated, but individual safety profiles can vary.	IS 6608 (2004)

Ingredient	Identity	Function	Origin	Benefits	Concerns	Long-term evidence	Status	Explanation	Sources
CI 26100	Colorant	Coloring agent	Synthetic	• Enhances visual appeal of the product	• Some colorants can cause allergic reactions	Safety varies by specific colorant; regulatory approval is required for use.	REVIEW	Colorants are regulated, but individual safety profiles can vary.	IS 6608 (2004)
